## PROJECTS

### How Can I Help?

- This app was built in order for volunteer managers and event organizers to better engage and manage volunteers. Organizers can create events and tasks to be completed. A volunteer then can sign up for a task to complete. While the app was built with non-profits in mind, a private business or individual could use it to manage events.
- The app was built utilizing four different data tables. Programs used were: HTML, CSS, Javascript, Node.js, Express, PostgreSQL.

### Is it Raining on Your Parade?

- We built this app in order to retrieve local events and the expected weather forecast so that a user could plan accordingly. The app retrieves local events using Yelp's API and uses the time and location of the event to retrieve weather data from Open Weather API.
- It then combines the data returned into a single card which displays the event, details of the event(location, time, etc.) and the expected weather. Programs utilized were Javascript, HTML, CSS, and DOM Manipulation.
